

Boom Lifts

Boom Lifts Training Kingston - Boom lifts are machinery that has a platform that may be lowered or lifted to different heights, therefore making this piece of machinery an important necessity in a wide variety of professions. Available in several specific kinds such as aerial platform lifts, scissor platform lifts, and knuckle boom lifts, each model functions very specifically.

Aerial hoists are most commonly used to transport people at snowboard lodges who are not at ease using a snowboard lift. These platform lifts operate much like an elevator, snowboarders can be slowly but surely moved up the mountain, stopping at stations along the way until they arrive at the top. Aerial hoists are also utilized in construction, transporting workers securely up and down the sides of multi-level construction sites.

Scissor lifts are quite regularly utilized by service providers as the ideal way to securely permit employees to fix and work on cables and wires attached to poles. Telephone, cable and power companies have relied on the efficiency of this kind of boom jack for years.

The knuckle boom jack is built for use within locations of irregular ground and where the need to reverse direction could be required. This type of boom lift has the capability to fit in tight spots where a scissor jack cannot fit. Working among numerous equipment in a production facility or in near proximity between two walls, the knuckle boom also features a standard table equipped with rails for protection and worker safety.

The style of boom lift needed by corporations will often depend on the nature of the job required. Fortunately, there are suitable types for just about any task.
