Kingston Manlift Ticket

Kingston Manlift Ticket - The Manlifts and Elevated Platforms program provides training on the rules, regulations and proper application of safe operating procedures and work practices involved in daily activities for people who work utilizing this machinery. The course has been designed for individuals who are actively involved in these activities or those who have a basic knowledge of this equipment.

manlifts and aerial platforms have become common and integral machinery in industrial settings during the past few decades. These machines provide an easy way to lift employees close to what must be performed on a stable platform apparatus, allowing staff to perform tasks with greater safety and comfort rather than being perched on top of scaffolding or ladders.

The manlift is like other industrial devices in that they are safe if utilized correctly. Because they elevate employees above floor or ground level, accidents could easily happen and this may lead to serious death or injuries for both the operators of the manlift and any passerby who may be unlucky enough to be standing underneath.

There are different kinds of manlifts. The majority fall into 1 of 2 categories: the articulating boom lift, that has the capability of both horizontal and vertical movement and the scissors lift, that is capable of moving up and down.
