Kingston Crane Safety Training

Kingston Crane Safety Training - Both crane operator as well as their employers should be aware of all the potential problems associated to the operation of an overhead crane. All over North America, there is legislation which provides regulation for the safe inspection, maintenance and operation of lifting equipment. Crane Safety courses truly help crane managers and owners accredit their drivers based on the provincial legislation.

We have designed numerous training courses to equip drivers with all of the knowledge and skills needed in order to make crane lifting safer and easier. Operator training actually helps to lengthen the crane's life span by guaranteeing crane's safe operation and high performance.

Articulated cranes under 16,000 lbs. capacity could only be operated by operators who are accredited. Operators must know about the features and operational characteristics of the equipment. Before use, a pre-operational machine check should be performed. There is a legal requirement to carry out a pre-operational inspection as well as a check of the overhead conditions and work-site ground.

The manufacturer's guidelines provide information about maintenance and inspection, unloading and loading of the crane. The law requires daily and annual inspections. Drivers have to maintain an up-to-date logbook within most regions. They might be required to validate machine warranties.

It is recommended that companies include remote control devices to their cranes. Remote control enhances safety by allowing the operator an easier alternative for handling the crane.

Placing a high priority on crane safety helps a company's bottom line. Businesses which follow safe equipment practices normally enjoy greater cost savings compared to those which don't. The risk of machine damage and personal injury is greatly lessened if a well trained operator is handling the crane. Safety conscious drivers are much more productive resulting in reduced times needed for loading and unloading.
